## 101 **1 Motivation and objective**

102 In 2003 a Working Group (TC3/WG16) was established within the PROFIBUS Nutzerorganisation  
103 e.V. (PNO) to develop a cost-effective point-to-point communication technology between sen-  
104 sors/actuators and fieldbus nodes or controllers. The companies interested in IO-Link have joined  
105 together as IO-Link members for the purposes of coordinating and organizing the further develop-  
106 ment and dissemination of this technology.

107 Following completion of the first version of the specification for the communication part in October  
108 2006, the first version of the system of rules for the cooperation between TC3/WG16 and IO-Link  
109 members was developed. That system of rules had a validity period of 3 years, which ended on De-  
110 cember 31, 2009.

111 This version of the rules describes the cooperation between the IO-Link members and the PNO as of  
112 January 2010.

### 113 **1.1 Technology**

114 Even today, most of the sensors used in production technology still consist of simple electromechanical  
115 switches whose signal status is made accessible by means of so-called remote I/Os of the  
116 controller when fieldbus technology is used. The connection for the 24 V power supply and the  
117 switching signal is usually made via a 3-wire cable. Over time, these simple switches have been  
118 supplemented with sensor types that use optical, inductive, capacitive, transformer and other physical  
119 effects in order to achieve advantages such as no-contact operation, simpler adjustment, etc.  
120 This trend was facilitated by the availability of tiny, low-cost, and robust microcontrollers. However,  
121 this 3-wire connection technology does not permit the use of engineering tools or controllers to pa-  
122 rameterize these very flexible, high-performance sensors or the display of the necessary detailed  
123 diagnostic messages. Because most microcontrollers used also have a UART interface, it stood to  
124 reason to create a more intelligent design of the "last meter" between sensor and controller or field-  
125 bus node. Added to that is the fact that the new IO-Link communication will be integrated in existing  
126 mounting formats and 3-wire connection technology and, thus, the product range does not have to be  
127 expanded. Of course, the IO-Link technology described applies equally to sensors and actuators  
128 used in production technology.

### 129 **1.2 Fieldbus independence**

130 Manufacturers of sensors with conventional 3-wire connection technology did not have to give any  
131 thought to the usability of their sensors on the fieldbuses available on the market. Switching signals  
132 and connection technologies are extensively standardized and adequately decoupled due to the lack  
133 of digital communication. In fact, with the emergence of IO-Link the connection technology has re-  
134 mained the same. However, the mapping of the sensor user data onto the cyclic bus traffic, the sen-  
135 sor parameters onto the starting parameterization of the fieldbuses and/or reparameterization during  
136 operation, and the sensor diagnostic information onto the diagnostics reporting and help systems of  
137 the fieldbuses represents an additional technical challenge. On the one hand, the integration into a  
138 certain fieldbus should be as seamless as possible, while on the other hand, it should be independ-  
139 ent of the fieldbus.

### 140 **1.3 Acceptance of other organizations**

141 The requirement just mentioned is also the reason behind the creation of these rules, in order to de-  
142 fine a clear understanding and action framework for all participants. It should also define, among  
143 other things, the relationship between the IO-Link members and the PROFIBUS Nutzerorganisation  
144 e.V. (PNO), the role of the PNO, and the relationship to other fieldbus organizations.  
145 The goal is to promote their acceptance of IO-Link.

## 146 **1.4 Responsibilities**

147 In addition to the rules defined here, the PNO has authoritative control as soon as the technologies  
148 represented by it (e.g., PROFIBUS, PROFINET, or the engineering associated with these) are af-  
149 fected.

## 150 **2 Organization within PNO**

151 The IO-Link Specifications V1.0 were developed jointly within WG16 of TC3 and published.

152 In order to better respond to the global interest in IO-Link, the PNO Advisory Board decided to estab-  
153 lish a new Technical Committee (TC6 "IO-Link") at its meeting on September 25, 2009. The organiza-  
154 tional structure in effect up to then, consisting of a working group with various subgroups, is being  
155 transferred 1:1 to TC6.

156 The existing "TC/WG Guidelines" [A1], the supplemental "IPR-Rules" of the PNO containing specifi-  
157 cations for handling intellectual property rights (patents and copyrights) [A2], and the "Document  
158 Management" [A3] of the PNO and its bylaws also apply to the IO-Link members without exception.  
159 Supplemental rules are presented in this paper and its appendices.

### 160 **2.1 TC6, IO-Link**

161 The working groups of TC6 will address various topics. Specifically, these topics are:

- 162 1. Technology, currently WG1
- 163 2. Marketing, currently WG2
- 164 3. Integration, currently WG3
- 165 4. Profiles, currently WG4

166 Possible future topics include:

167 Quality assurance, Wireless, IO-Link Safety, etc.

#### 168 **2.1.1 Organization of TC6**

169 The activities of TC6 are carried out strictly in accordance with §1 of the "TC/WG Guidelines". The  
170 central task of the IO-Link members is to decide on the technical development of the IO-Link tech-  
171 nology. Included under this is the independent establishment of connections with other organizations  
172 in coordination with the PNO Board of Directors.

173 All members of PROFIBUS&PROFINET International (PI) can also serve as members of and partici-  
174 pate in the WGs of TC6 IO-Link; they must however acknowledge these rules in writing.

175 Interested companies must submit an application for membership to the PNO Support Center. The  
176 application form requests information on the technologies supported (IO-Link, PROFIBUS, PROFI-  
177 NET) in products and services.

178 The PNO Support Center will inform the TC6 Leader.

179 Development and marketing of IO-Link products using IO-Link logos is only permitted if the company:

- 180 1. Has become an IO-Link member and has acknowledged these rules in writing
- 181 2. Has issued a manufacturer's declaration using a test tool released by TC6

## 182 2.1.2 Work processes

183 The IO-Link members consist of the founding members (members up to the cut-off date of March 24,  
184 2006), members that joined after this cut-off date but before the merging date of December 31, 2009,  
185 and all companies joining after this date.

186 The prerequisite for obtaining membership is

187 – written acknowledgement of these rules (written document).

188 Note: As a result of opening the membership to non-PNO members, the possibility of participation shall be offered from  
189 research or user groups.

190

191 The IO-Link members meet once per year (General Meeting). Every 3 years, the General Meeting will  
192 elect a **Steering Committee**, consisting of approximately 5-15 company representatives (including  
193 Spokesperson). Each member (company) can nominate a candidate for this. The WG Leaders of TC6  
194 (IO-Link), who are nominated by the Steering Committee and confirmed by the PNO Advisory Board,  
195 become automatic members of the Steering Committee. At the IO-Link General Meeting, the mem-  
196 bers of the Steering Committee will be elected from a nominated list of applicants (electoral list). The  
197 number of members selected always consists of at least one person more than the number of WG  
198 Leaders serving in the Steering Committee. If a new WG is established, a person on the electoral list  
199 will automatically move up to the SC.

200 Rights and obligations of IO-Link members:

201 – Definition of technological orientation

202 – Orientation of the standardization strategy (national and international)

203 – Confirmation of the annual planned budget for use of financial resources

204 – Worldwide promotion of the IO-Link technology (marketing)

205 – IO-Link integration in consultation with the fieldbus organizations

206 – Election of the Steering Committee

207 – Definition of and amendments to this system of rules, which requires a 2/3 majority decision

208

209 Each IO-Link member can run for election to the Steering Committee.

210 When the IO-Link group is dissolved, all rights for the IO-Link technology, results of the IO-Link work,  
211 and financial resources from contributions will be transferred to the legal successor organization.

212

## 213 2.2 Steering Committee (SC)

214 The Steering Committee steers the implementation of technology- and marketing-related measures in  
215 the individual WGs. If required, the WG Leader can set up sub-working groups within the WG for a  
216 limited time period and appoint a sub-WG Leader.

217

218 Rights and obligations of the SC:

219 – Election of the SC spokesperson

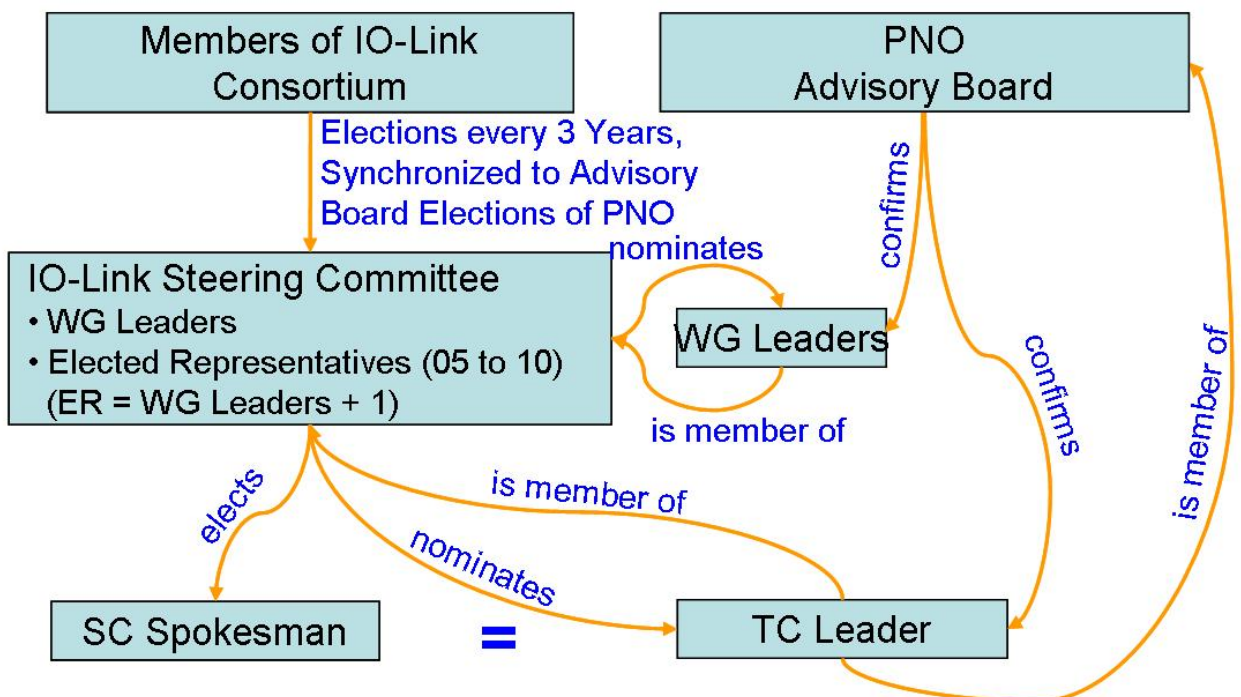

220 – Nomination of a TC Leader for TC6 (Spokesperson and TC6 Leader should be the same person);  
221 the TC6 Leader is automatically a member of the SC

222 – Nomination of the WG Leaders

223 – Steering of the technology development (additions to standards, profile creation, testing)

224 – Steering of the IEC-related activities

- 225 – Approval and steering of the actions decided in the Marketing WG
- 226 – Release of financial resources
- 227 The Steering Committee meets 4 to 6 times per year, as needed.
- 228 Meeting minutes are prepared for each meeting and are stored on the PNO project server “IO-Link
- 229 Projects”. Each IO-Link member has access rights to this server.
- 230 The SC reports on its main activities and use of financial resources at the annual General Meeting.
- 231 Any member can submit questions to the SC. The topics raised will be handled at one of the next
- 232 meetings.
- 233 The decision-making process within the IO-Link membership is shown in Figure 1.
- 234 The following rules apply to the Steering Committee:
- 235 – All members in the Steering Committee (companies) have only one vote.
- 236 – Proxies:
- 237 – Elected SC members of member organizations (companies) can appoint a proxy in their com-
- 238 pany to exercise the voting right
- 239 – WG Leaders can have their voting right exercised by a representative of their own company
- 240 as well as by a particular representative of another company.
- 241 – The SC can make decisions when at least 3 members are present. Absent members or proxies
- 242 are not counted in the vote.
- 243 – Members will be notified in good time (at least 2 weeks) of pending decisions.
- 244 – All decisions are deemed accepted with a simple majority. Exception: organizational changes re-
- 245 quire approval by a 2/3 majority.
- 246 –

### SC Spokesman and TC Leader should be the same person

247  
248

Figure 1.: Decision flow

## 249 **Role of the Spokesperson**

- 250 – Convenes the SC and the annual General Meeting.
- 251 – Serves as moderator of the SC meetings and the General Meeting.
- 252 – Performs external IO-Link communications (e.g., press, international standards committees,  
253 other fieldbus organizations).
- 254 – Reviews conflict CRs reported to him and brings about a decision

255

## 256 **Role of the TC6 Leader**

- 257 – Coordinates all activities of the Support Center with regard to IO-Link
- 258 – Represents the IO interests in the PNO, and vice versa
- 259 – Reports to the PNO Advisory Board
- 260 – The TC6 Leader is automatically a member of the SC
- 261 – Represents the SC spokesperson

## 262 **2.3 Conformity and certification**

263 For IO-Link Master and IO-Link devices, a manufacturer's declaration of IO-Link conformity will be  
264 required as soon as the IO-Link General Meeting has developed an appropriate test and test specifi-  
265 cation as well as an automatic protocol tester for IO-Link Master and IO-Link devices that can be  
266 purchased or licensed by all PI members. The format of the manufacturer's declaration will be de-  
267 fined by the IO-Link members and described in the test and test specification. A certification re-  
268 quirement may be decided on by the IO-Link General Meeting at a later time.

269 For IO-Link Master with fieldbus connection, the relevant certification or conformity guidelines of the  
270 respective fieldbus organizations apply.

## 271 **2.4 Competence Centers and Test Centers**

272 The IO-Link General Meeting can approve accreditation of Competence Centers and Test Centers for  
273 IO-Link technology.

274 Bus Competence Centers and Test Centers, such as those of PI, can also be qualified for IO-Link  
275 technology, in order to serve as a complete contact for IO-Link Master devices with bus connection.

## 276 **3 Finances/member contributions**

277 The one-time IO-Link contribution of €10,000 to be paid for new members up to the end of 2009 has  
278 been eliminated as of January 1, 2010. Instead, starting from this date IO-Link members will be as-  
279 signed a portion of the annual PNO member contributions, which is calculated based on members'  
280 activity in the PNO, minus costs incurred in the Support Center.

281 The following scheme is used to calculate the financial contributions to be used for IO-Link activities:

- 282 - PNO members, if they join exclusively for the purpose of working on IO-Link: 100% of  
283 the annual contribution of these members
- 284 - PNO members that also want to work on IO-Link: 20% of annual contribution
- 285 - IO-Link members that do not join the PNO (exceptions with strategic importance for  
286 IO-Link with separate cooperation agreement): 80% of annual contribution of these  
287 members (20% goes to covering the expenses within the PNO, e.g., to execute a co-  
288 operation agreement)

289 - Subtracted (prior to transfer of financial contributions to TC6) are the annual services pro-  
290 vided by the PNO Support Center for IO-Link. The expenses of the previous year are used as  
291 the basis for calculating these services.

292 The PNO determines both the member contributions as well as the costs for IO-Link and documents  
293 this information in the form of a profit/loss statement on an annual basis (at the end of the calendar  
294 year). Each IO-Link member is entitled to view the data through the Leader of TC6 IO-Link.

295 The budget for the fiscal year (calendar year) of the IO-Link members is based on the data presented  
296 by the PNO. The resources for IO-Link are managed by the PNO Support Center.

297 If the budget is used up by IO-Link projects or at the decision of IO-Link members, additional projects  
298 can be decided on according to "TC/WG Guidelines" [A1]. §6 of the "TC/WG-Guidelines" describes in  
299 detail the transaction of a project financed by an IO-Link member.<sup>1</sup>

300 The contributions indicated above are reviewed annually with the Support Center and the TC6  
301 Spokesperson or TC6 Leader.

302 One-time contributions paid before December 31, 2009 will not be refunded.

### 303 **3.1 Appropriation**

304 The budget must be used for IO-Link technology and IO-Link marketing projects.

### 305 **3.2 Release of resources**

306 The Steering Committee will present an annual budget plan at the General Meeting for approval  
307 (planned expenditures for marketing, technology, etc.). If the General Meeting has approved the plan  
308 at its annual meeting, the Steering Committee will decide on the use of the budget. The decisions are  
309 by simple majority and must be secured within the framework of the budget plan. Timely notification  
310 of a pending funding decision must be included in a SC Meeting announcement issued according to  
311 the rules.

### 312 **3.3 Cash audits**

313 For every plenary meeting of the TC6 (IO-Link) SC, the PNO Support Center will inform the TC6  
314 Leader of the current status of resources along with a forecast. He will inform the SC during the  
315 meeting.

316 The cash audit is performed as part of the overall annual audit of the PNO. The report is issued as  
317 part of the PNO General Meeting.

318 The results will be announced in the meeting minutes and during the IO-Link General Meeting.

## 319 **4 Documents**

320 Rules for creating documents are specified in §3 of the "TC/WG Guidelines". As a deviation to these  
321 guidelines, the IO-Link specification is not labeled as "PNO confidential", in order to make it accessi-  
322 ble to other bus organizations. The same applies to the bus-specific integration specifications outside  
323 PROFIBUS DP and PROFINET IO.

324 Rules for the layout, the required formal parameters, the creation and review processes, and the dis-  
325 tribution of a document are specified in the "Document Management" of the PNO [A3].

---

<sup>1</sup> Adherence to an orderly project sequence ensures adherence to functionality, schedule, quality, and budget requirements.

#### 326 **4.1 Special rules for IO-Link**

327 Deviating from these rules, it is specified that the IO-Link documents will be formatted differently  
328 from the PNO design. In spite of that, the requirement remains to use a format template that complies with IEC requirements.  
329

#### 330 **4.2 IEC**

331 The IO-Link technology will be standardized within the IEC. The IO-Link General Meeting will make  
332 the decisions necessary for this (NP, specification of IEC WG responsible, standardization path, etc.)

### 333 **5 Marketing**

334 The IO-Link members have a common interest in introducing the IO-Link technology as quickly and  
335 broadly as possible. Their interest also extends to acceptance by other fieldbuses. In addition to dissemination via the standard PNO channels (TC6/WG2 Marketing, PNO Support Center), other marketing activities are therefore needed and permitted. However, these must not be formulated so as to not damage the PNO and the PI members.  
338

#### 339 **5.1 Web server**

340 The TC6 can also set up a neutral server that contains the technical information and marketing activities. However, PNO-specific information is only available by means of corresponding links to the IO-Link Projects Web server.  
342

343 A different specification applies to the distribution of documents, in that the IO-Link specifications can also be offered for download on Web servers of other fieldbus organizations and on the neutral IO-Link Web page.  
345

#### 346 **5.2 Trade fair appearance**

347 The PNO extends an offer to TC6, under the usual conditions, of exhibit space in the PNO booths at various trade fairs and will be considerate of neutrality requests, to the extent possible. The procedures at international trade fairs will be governed by the Regional PROFIBUS&PROFINET Associations (RPA). The PNO Support Center will provide support for these.  
350

351 Notwithstanding this offer, the IO-Link members are free to arrange their own trade fair activities.

#### 352 **5.3 Contact with associations**

353 In coordination with the PNO Support Center, the SC can contact industrial associations (e.g., VDMA, ZVEI, VDA, etc.) as a PNO representative and jointly conduct marketing activities. The PNO Support Center also provides support for this. Activities going beyond this require coordination with the PNO Board of Directors.  
356

#### 357 **5.4 Contact with other fieldbus organizations or companies**

358 Contacts with fieldbus organizations and companies that belong to or drive other fieldbus organizations require the approval of the PNO Board of Directors. For its part, the PNO is obligated to enable cooperation agreements with the above-indicated companies or organizations for purposes of cooperation with IO-Link. This should ensure the degree of dissemination of IO-Link worldwide.  
360

362 The IO-Link members must be informed about these types of activities, and negotiations must be coordinated or carried out jointly with them.  
363

364 If necessary, the SC can decide on special rules regarding member contributions without the consent of the General Meeting.  
365

## 366 5.5 Publications

367 It is recommended that important publications be coordinated with the IO-Link members and that the  
368 press office of the PNO Support Center be integrated (copied).

## 369 5.6 Slide layout

370 The TC6 administers an independent, uniform layout for slide presentations. This layout will be  
371 placed on the PNO Web server, as well as on the neutral IO-Link Web server, for download and must  
372 be used for all cross-fieldbus presentations. For all PNO-relevant topics that pertain to the basic in-  
373 formation of IO-Link and its integration in PROFIBUS DP or PROFINET IO, the PI slide templates  
374 may be used.

## 375 6 IO-Link logo

376 The IO-Link technology will be disseminated under its own logo (Figure 2).

377

378

Figure 2: IO-Link logo

379 The rights for the logo as represented in Figure 2, including its colors, have been transferred to the  
380 PNO (formerly Balluff and ifm) and must be used without any alteration. It is currently protected in  
381 Germany (EU) and the United States. It is available for download on the IO-Link Web pages in the  
382 protected area. When used in countries in which it is protected, it must be marked with ®.

383 Usage rights for logo:

- 384 – Free to any PI member in conjunction with presentations and publications
- 385 – In conjunction with products of IO-Link members that have certified their products with a tool re-  
386 leased by TC6 and confirmed this with a manufacturer's declaration (Section 2.3)
- 387 – For all members that have acknowledged these rules (according to Section 2.1.2)

## 388 **7 Patents and property rights**

389 The rules for handling patents and property rights in conjunction with the IO-Link technology are  
390 specified in the current and new "IPR Rules" document of the PNO [A2]. These rules must be ob-  
391 served.

392 The following is specified in deviation to these rules:

- 393 – The use of relevant property rights of the IO-Link technology, including for other fieldbuses such  
394 as PROFIBUS, as defined in the specification, is granted free of charge to members of the PNO  
395 and its related regional organizations (RPA).
- 396 – The usage rights are granted only for the purpose of implementing the IO-Link technology de-  
397 fined in the IO-Link specification, and not for independent modification or further development.
- 398 – Sublicensing to a third party (non-affiliated company) is permitted exclusively for the purpose of  
399 manufacturing and sales of IO-Link products. No rights going beyond this will be granted.
- 400 – Every IO-Link licensee is obligated to grant usage rights for IO-Link-relevant property rights to  
401 the IO-Link members free of charge.
- 402 – Acknowledgement of these obligations is the prerequisite for IO-Link membership.

403 The IO-Link-relevant property rights are listed in Appendix B.
