

## Call for experts for "IO-Link smart actuator profile"

The Smart Sensor Profile is an enormous success within IO-Link. The achieved standardization makes it much easier for the customer to take sensors from different manufacturers in operation.

In recent years, more and more actuators with IO-Link interfaces have come onto the market. Many of these actuators have similar functions, which can be standardized to allow control via function blocks, for example.

Therefore, a new profile working group, focusing on electrical und pneumatical drives, is looking for experts, who are willing to contribute actively their experience and requirements in this field.

Possible issues are:

- Requirements
- Scope/Classification
- Common functionalities
- Parameter structures
- Integration of the Smart Sensor Profile
- Function blocks
- Testability

All interested member companies are invited to join this working group. Please sign in if you are interested until **Jan 31th, 2020** via e-mail to [Ingo.Baumgardt@leuze.com](mailto:Ingo.Baumgardt@leuze.com)
